CMI Model 2050-003 UPS Battery Module with Relay Installation Instructions

STEP 1

If the configuration of the Terminal includes a 2050-003 UPS Battery Module and the Relay is to be used, follow the Relay Connection Chart on Figure 1 on how to connect the wires to either ring bells or for door access. If the bells or door access strike needs more amperage than the Relay can handle, then call ADI Support Dept. for additional options.
