This documentation may not be distributed outside your organization. It may not be duplicated in any way without expressed written consent of NOVAtime Technology, Inc., except that you are given permission to duplicate it in a printed form for the purpose of distribution to others in your organization for use in selling and supporting NOVAtime Technology, Inc. products.

The information contained within this document is based on information believed to be accurate. However, the information supplied is distributed on an "as is" basis, without any warranty or guarantee. NOVAtime Technology, Inc. shall not have any liability to any entity or person in regards to any loss or damage caused or alleged to be caused directly or indirectly by the configuration information contained in this document.

The information contained in this document does not necessarily reflect all the capabilities of the equipment listed, and any information contained in this document shall not be considered to be an authoritative description of the products mentioned herein.

Trademark names may appear throughout this document. Rather than list the names and entities that own these trademarks or insert a trademark symbol with each mention of the trademark name, NOVAtime Technology, Inc. states that it is using those names in editorial fashion only for the benefit of the trademark owner, with no intention of infringing on the trademark. No mention of a company or trademark is intended to convey endorsement or other affiliation with NOVAtime Technology, Inc.

NT5000II Time Clock

Key Features

The NT5000II terminal is a versatile, easy to use time clock and/or access control terminal. The unit allows for Magstripe, Bar Code, and Proximity Badges—and it can communicate via Ethernet, Modem, RS232, or RS485 communication protocols. Below are many of the terminal most powerful features.

- 5000-Punch History Retention – This fault-tolerant feature allows the last 5000 records from each time clock to be retrieve in cases of catastrophic data loss due to computer / server failure.
- Software configuration/control of LAN IP parameters.
- Keypad template can be changed to reflect unit's function key use.
- Standard battery backup allows for retention of data and time for up to 30 days.
- Optional operational battery to operate the unit for up to 2 hours.
- Group Transfers – up to 8 different levels (i.e. Location, dept, job, etc...)
- One-key transfers – Assign actual items, like department 1124 to a function key. When employees use the key, they will be in that department w/out keying in any numbers. This works for 1-8 different group levels—any combination.
- Cigarette-Break key – A function key can be setup to automatically deduct a specified amount of time.
- Attendance and/or Access Control in one terminal.
- Access control can be by function key, while leaving Swipe & Go for attendance, or visa-versa.
- Lockout/Access Control – Allows restriction of employee entry/punches.
- View benefit accrual balances at the clock.
- View current pay period hours at the clock.
